

Supplementary Figure 1. The development of human lymphocytes during *in vivo* tumor suppression in hu-HSC NOG-IL-2 Tg mice.

As described in Figure 8(A), after inoculation of K562, mouse PB was collected each week for 4 weeks to evaluate the differentiation of human immune cells. Frequencies of CD45⁺ cells, CD56⁺ NK cells, CD19⁺ B cells or CD3⁺ T cells in total MNCs are shown.

Supplementary Figure 2. The expression of CCR4 on L428 cells.

L428 cells were stained with anti-CCR4 antibody and analyzed by FACSCanto.
