

**Supplemental Figure 1.** Imaging flow cytometry data of isolated PMN stained with CD62P (P-selectin) and CD45 antibodies of 3 representative donors. The Positive Control image includes isolated platelets mixed with isolated PMN. The images represent the brightfield (Ch01), CD62P (Ch03), and CD45 (Ch05) channels. Note the minimal amount of P-selectin signal on isolated PMN as compared to the signal found on PMN mixed with platelets.
