

Supplementary Figure 1. IRAK1 deficiency does not affect IRF3 phosphorylation downstream of TLR4. (A) Wild type and IRAK1^{-/-} BMDM were stimulated with LPS (1μg/ml) for the indicated times and whole cell lysates generated. Cell lysates were resolved by SDS-PAGE (10%) and subjected to immunoblotting for phospho-IRF3 (S396) and β-actin for a loading control. Similar results were obtained in two independent experiments.
