

<b>KIR3DL1</b>	<b>Genetic Lineage</b>	<b>Position 283</b>
*001	Recombinant	W
*002	*015-like	W
*005	*005-like	L
*007	Not included	L
*009	Recombinant	W
*015	*015-like	W
*020	*015-like	W
*029	*015-like	W
*053	Not included	L

**Supplementary Table 1.** A complete list of KIR3DL1 allotypes tested against the LF9 P8 panel of HLA-B\*57:01 tetramers. The genetic lineage (4) and amino acid present at position 283 (W tryptophan, L Leucine) are indicated in the second and third column respectively. “Recombinant” refers to alleles that are a result of interlineage recombination, those marked “Not included” were not analyzed in (4).
