## Supplementary Figure 1: UV does not alter the proportion of S1P<sub>1</sub><sup>-</sup> cells in the skin-draining lymph nodes.

Mice were exposed, or not, to a single dose of UV and sacrificed 24 h later. Skin-draining (inguinal) lymph nodes were collected and processed for flow cytometry analysis. (A) Gating strategy. (B) Percentage of CD3<sup>+/-</sup> S1P<sub>1</sub><sup>+/-</sup>. Data pooled from 2 radiation experiments (experiment 1 contained 6 mice per group and experiment 2 contained 3 mice per group), mean shown. Statistics conducted using Student's t test.
